

VaultScan

Automated Vulnerability Assessment Report

Target Network: 10.0.0.1-50
Generated on: 29 March 2026, 05:27

Confidential Document

1. Executive Summary

Total Devices Scanned	2
Devices with Identified Risks	2
Total Vulnerabilities	2

2. Detailed Findings

Device: 10.0.0.1

Risk: LOW Score: 1/10

Open Ports: 80

Findings

- Authentication can be bypassed, allowing unauthorized access.

Remediation: Update to the latest security patch and disable default telnet ports.

Device: 10.0.0.3

Risk: LOW Score: 1/10

Open Ports: 80

Findings

- Authentication can be bypassed, allowing unauthorized access.

Remediation: Update to the latest security patch and disable default telnet ports.

3. Recommendations

- Replace all default credentials with strong passwords
- Regularly update firmware and software
- Disable unnecessary services and ports
- Implement network segmentation
- Continuously monitor network activity

This report is automatically generated by VaultScan. All findings should be validated before remediation.
